Depth of Diving	5 - >40m	Water Temperature	20 – 29 ° C
Visibility	5-30m	Experience Level	Beginner to advance
Currents	Can be strong > 8 knot	Number of Dive Sites	>35

Komodo National Park is located in the centre of the Indonesian archipelago between islands of Sumbawa and Flores. The World Heritage site is blessed with secluded beaches, amazing coral reefs and crystal clear waters. The area has over 260 coral species and more than 1,000 species of reptiles, dolphins, manta rays, turtles, whales and dugongs. Komodo is considered one of the best dive sites in the world – diving or snorkelling in this area will truly leave you with extraordinary experiences.

Within the national park contains hundreds of unique species such as wild boars, water buffalos, deer's, monkeys and the famous Komodo Dragons. The Komodo Dragon is the largest land – dwelling reptile in the world with the largest found being 3.13 meters long and weighted 166KG. Their foot prints are often seen along pink sandy beaches, or while hiking in the hills with knowledgeable park rangers. They can live up to 50 years and grow over 100kg in weight and up to 3m from head to their tail tip. To raise their body temperature they bask in the sunlight during the day and burrow into the ground at night. They stalk, ambush and devour wild deer, pigs, buffalo and even horse for sustenance.

Approximately a third of the park is taken up by the up by the islands of Komodo, Rina, Gili Mota, Nusa Kode and Padar, while the rest is marine territory consisting of coral reefs, seagrass beds, mangrove, and semi – enclosed bay. The 1,817 km² Komodo National Park established in 1980 was listed by UNESCO as a World Heritage Site in 1986 and lies in the famous Coral Triangle – the global heart of the marine bio-diversity.

RAJA AMPAT

Diving Season	November - April
Depth	5 - >40m
Visibility	10 – 30m
Currents	Medium to strong
Surface Conditions	Mild to strong
Water Temperature	27 – 30 °C
Experience Level	Beginner to advanced
Number of Dive Sites	>250

Raja Ampat translated means 'four kings', referring to the islands Salawati, Batanta, Waigeo and Misool covering over 17,000 km² of pristine paradise. These are in turn surrounded by a myriad of amazing, untouched smaller isles with picturesque postcard beaches and sheer, ragged limestone cliffs. The Baliem Valley, running through Irian Jaya's string of jutting mountain peaks, is home to the gentle warrior tribes of the highlands, the Dani. The region on the north-western tip of New Guinea comprises about 1,500 islands spread over 50,000 km² of spectacular scenery. It is here where the remote islands of Misool, Wayag and Penemu are located. 70% of the world's total number of coral species is said to be found in the amazing underwater world of Raja Ampat. This area has one of the greatest and healthiest coral reefs for its size in the world with nearly 1,200 species of fish and 550 species of coral. Discover the most beautiful soft coral jungles in the world. Raja Ampat, is home to the world's most biodiverse marine region, an underwater Shangri-la for diving enthusiasts and marine biologists. Above the water, kayak in secret bays enclosed by jagged limestone pinnacles covered with orchids and tropical vegetation.
